

QUICK FIX: Bucket Not Found Error

30-Second Fix

1 Go to Supabase Storage

<https://supabase.com/dashboard> → **Storage**

2 Create Bucket

Click **"New bucket"** → Name: `customer-logos` → ☒ **Public bucket** → **Create**

3 Test

Upload a logo in your app → Should work! ☒

Details

Bucket Name: `customer-logos` (exactly this!)

Settings: Must be PUBLIC

Location: Same Supabase project as your DATABASE_URL

Verification

```
# Check if bucket was created successfully
# You should see it in: https://supabase.com/dashboard/project/YOUR_PROJECT_ID/storage/buckets
```

In your Storage dashboard, you should see:

 `customer-logos` (Public) ← This should exist!

If It Still Doesn't Work

1. **Check project:** Make sure you're in the same Supabase project (check DATABASE_URL)
 2. **Check public:** Bucket must have "Public" badge
 3. **Check name:** Must be exactly `customer-logos` (no typos!)
 4. **Add policies:** Run the SQL from `FIX_BUCKET_NOT_FOUND.md` Step 5
-

Full Guide

See: `FIX_BUCKET_NOT_FOUND.md` for detailed step-by-step instructions with screenshots.

Success Test

Try uploading a logo:

1. Go to <https://roblox-tool-ruddy.vercel.app/admin>
2. Customers tab
3. Click “Logo” for any customer
4. Upload an image
5. Should see: “Logo uploaded successfully to cloud storage”
